

2/1/2021

To whom it may concern,

I enthusiastically recommend Annie Waye for the position of Electrical and Computer Engineering Co-op.

Annie possesses outstanding technical competency, is meticulous and detail-oriented, works hard, is ethical, and understands (with considerable depth) the complexities of large-scale engineering projects. Annie is gregarious and works well with others.

Annie has the remarkable ability to tackle and learn new concepts very quickly with a fast transition to proficiency. I observed Annie apply this talent towards numerous endeavors – including schematic capture / PCB design, advanced microcontroller programming in C, surface-mount components / soldering, PCB population / testing, programming of embedded Linux devices using Python, analog signal conditioning, and constructing / testing a complex large-scale dynamometer (accompanied by a narrow “mission critical” window for completion).

Annie has advanced insight and understanding of the concepts that can transition a collection of ideas into a great working design. Her natural abilities as a leader are particularly noteworthy, and this combined with her technical skillset set her apart from the majority of students I’ve worked with in the past.

I urge her application to be afforded the highest level of consideration.

Respectfully,

Micheil Boesel
Senior Electrical Hardware Engineer
Hefring Engineering LLC, Boston MA
